Astana, Kazakhstan (UTC+5)
Languages: Russian - Native, English - B2

Frontend Developer with commercial experience at Purrweb, specializing in React and TypeScript, with strong experience in React Native and Expo. I build modern, responsive web applications and cross-platform mobile applications, focusing on clean architecture, reusable components and practical product solutions. My frontend experience includes React, Next.js, TypeScript, Redux Toolkit, TanStack Query, Zustand and GraphQL. I also have strong hands-on experience with React Native and Expo, including authentication, user flows, integrations, maps, geolocation, offline persistence and mobile UI. My personal projects include full-stack web applications built with Next.js, React, TypeScript, Supabase and PostgreSQL, as well as a cross-platform mobile travel application.

Currently based in Almaty, Kazakhstan and open to Frontend, React and React Native opportunities. Also open to remote work and relocation.

Key Competencies

- Web application development with React, Next.js, and React Admin.
- Mobile application development with React Native and Expo.
- Implementation of registration, authentication, and user flows.
- Integration of maps, geolocation, and background tasks.
- Working with GraphQL, Apollo Client, RTK Query, and TanStack Query.
- Designing application structure and frontend-backend interaction.
- Working with Supabase, PostgreSQL, and SQL.
- Optimizing interfaces and dynamic lists.
- Using Git in team-based development.

- Basic understanding of algorithms, data structures, and software design principles.

Tech Stack

Languages: JavaScript, TypeScript, SQL, Java

Frontend: React, Next.js, React Admin

Mobile: React Native, Expo, Expo Router

State Management / *Data*: Redux, Redux Toolkit, RTK Query, Zustand, TanStack Query, GraphQL, Apollo Client

Forms / *Validation*: React Hook Form, Zod, Yup

Maps / *APIs*: React Native Maps, Expo Location, Expo Background Fetch

UI / *Animation*: React Native Reanimated, Gesture Handler, SVG, Shopify FlashList, Draggable FlatList

Backend / *DB* / *Auth*: Supabase, PostgreSQL, Supabase Realtime, Supabase Auth, Expo Secure Store

Tools: Git, Node.js, Webpack, Vite, Maven, Nginx, Docker, Linux, EAS CLI

Testing: Vitest, JUnit 5, Mockito

Education:

Omsk State Technical University (Russia, Omsk)

Faculty of Information Technology and Computer Systems (FITICS),

Fundamental Informatics and Information Technology.

Incomplete higher education.

Work experience

React Native Developer - Purrweb (Russia, Omsk)

April - June 2026

Participated in the development of mobile applications using React Native, implemented user flows, integrations, and product features.

Gozap Mobile — Power Bank Rental App

- Implemented authentication via Google Account and Apple ID.
- Developed the power bank rental user flow.
- Contributed to the client-side implementation of the application.
- Worked with maps, geolocation, forms, and localization.

Tech Stack: TypeScript, React Native, Expo, Zustand, TanStack Query, React Native Maps, Expo Location, React Native Reanimated, Gesture Handler, SVG, React Hook Form, Zod, Expo Secure Store, i18next, Expo Localization, Google Sign-In, Apple Authentication.

React Native Developer Intern — Purrweb

October 2025 - December 2025

- Developed a mobile social network.
- Implemented registration, post creation, editing, and commenting functionality.

- Worked with GraphQL and Apollo Client.
- Used RxJS and Apollo Cache to build a reactive data architecture.
- Optimized rendering of dynamic lists via FlashList.
- Set up CI/CD via EAS Build.

Stack: TypeScript, React Native, Expo, GraphQL, Apollo Client, RxJS, Expo Router, React Native Reanimated, Gesture Handler, SVG, Shopify FlashList, BootSplash, Safe Area Context, Expo Image Picker, Expo Clipboard, React Hook Form, Expo Secure Store, EAS CLI.

Frontend Developer Intern - Purrweb
August 2025 - October 2025
Participated in the development of several web projects.

- Social Network
  - Implemented user flow for registration, publishing, and commenting on posts.
  - Worked with Apollo Client and GraphQL.
- Admin Panel
  - Developed the admin interface using React Admin.
  - Used React Avatar Editor and React Hook Form.
- News Portal
  - Implemented the news feed, filtering, favorites, and comments.
  - Worked with RTK Query, Next.js, and OpenAPI.

Stack: TypeScript, React, GraphQL, Apollo Client, React Admin, React Hook Form, RTK Query, Next.js, OpenAPI.

Academic Project - 7bits
November 2024 - June 2025
Developed a web application for conducting online quizzes with the ability to register users, create rooms, and host game sessions.

- Designed the application architecture.
- Configured the frontend and backend interactions.
- Configured the server and database.
- Implemented user registration and authorization.
- Implemented the quiz game logic and the single-player interface.
- Provided at least 90% unit test coverage.

Frontend stack: JavaScript, TypeScript, React, Redux, Redux Toolkit, HTML, CSS, Webpack, Node.js, npm, Vitest.

Backend stack: Java, Spring Framework, PostgreSQL, Nginx, Maven, JUnit 5, Mockito.

Solo projects:

- TaskFlow - Project and Task Management System (https://github.com/YuliaVorotintseva/taskflow)

- Finance Tracker - Application for thorough financial accounting (https://github.com/YuliaVorotintseva/finance_tracker)
- TravelTracker - Collaborative trip planner (https://github.com/YuliaVorotintseva/travel_tracker_mobile)

TaskFlow - Project and Task Management System

May - July 2026

1. Elevator Pitch

TaskFlow is a modern web application for managing projects and tasks using the Kanban methodology, built with a strong focus on performance, type safety, and team collaboration.

TaskFlow is built as a full-featured alternative to Trello and Jira, focusing on:

- Simplicity - an intuitive interface without unnecessary complexity.
- Performance - instant UI feedback thanks to optimistic updates.
- Type Safety - complete type safety from the database to the user interface.
- Team Collaboration - a flexible role and permission system.
- Modern Stack - leveraging cutting-edge web development technologies.

2. Features

Project Management

- Create projects with unique URLs (slugs).
- Automatic generation of standard columns (Backlog, Todo, In Progress, Done).
- Edit and delete projects with confirmation dialogs.
- Project descriptions with formatting support.

Kanban Board

- Drag-and-drop tasks between columns with instant visual feedback.
- Optimistic updates - the interface reacts before server operations complete.
- Task counters in each column.
- Customizable columns (add, delete, rename).

Task System

- Create tasks with a title and Markdown description.
- Priorities (Low, Medium, High) with color-coded badges.
- Assign tasks to project members.
- Task positioning within columns.
- Full editing in a modal window.
- Hotkeys for saving (Ctrl+S).

Comments

- Threaded structure with reply support.
- Markdown formatting.
- User mentions.
- Edit and delete your own comments.
- Relative timestamps (e.g., "2 hours ago").

Team Collaboration

- Role System:

    - *Owner* - full control over the project.
    - *Admin* - manage members and tasks.
    - *Member* - work with tasks.
    - *Viewer* - read-only access.
- Functionality:
    - Invite members via email.
    - Role and permission management.
    - Member list with avatars.
    - Protection against accidental removal of the project owner.
- Search and Filtering
    - Filters by priority, assignee, and search query.
    - URL state persistence for filters (easy link sharing).
    - Global search across projects and tasks (Ctrl+/).
    - Command palette for quick navigation.
- Activity Feed
    - Project event stream.
    - Track task creation, movement, and modifications.
    - Timestamps and action icons.

3. Technology Stack

The project utilizes modern, production-ready technologies:

Frontend	
Next.js 15	React framework with App Router and Server Components
TypeScript	static typing for code reliability
tRPC	type-safe API without code generation
React Query (TanStack Query)	server state management and caching
Tailwind CSS	utility-first CSS framework
Radix UI	accessible UI primitives with ARIA support
@dnd-kit	modern drag-and-drop library
TipTap	extensible WYSIWYG editor based on ProseMirror
next-auth (Auth.js)	authentication and session management
nuqs	type-safe URL state management
Zod	schema validation
date-fns	date and time manipulation

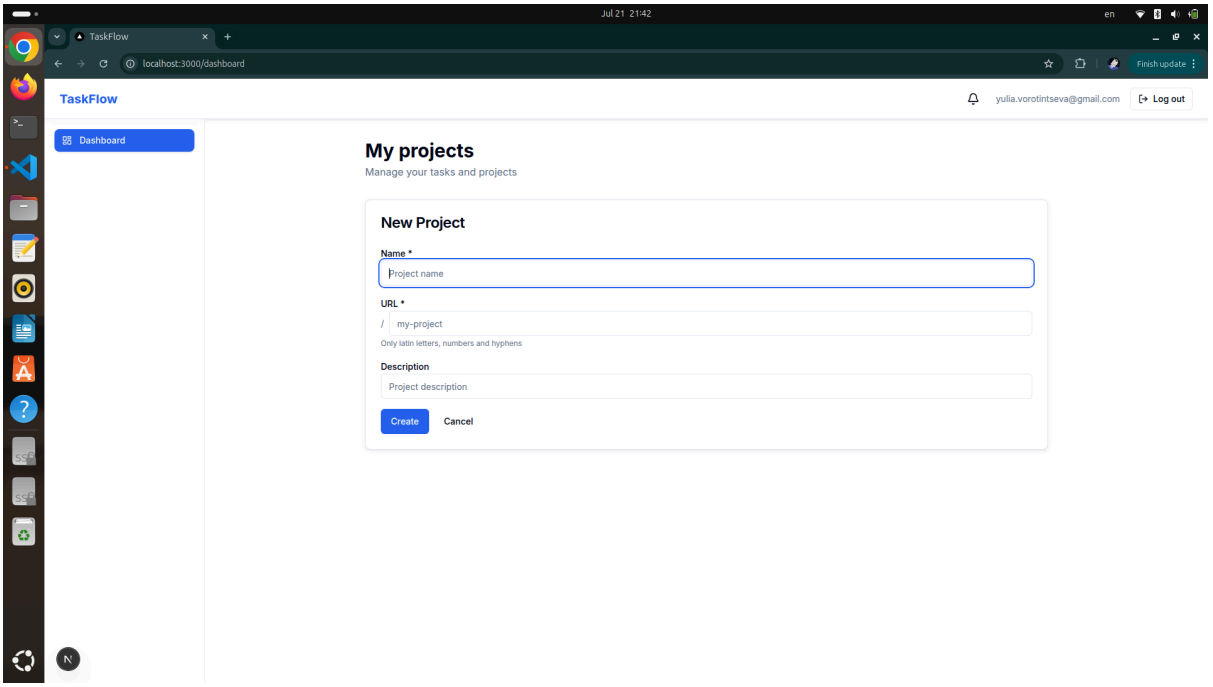

Backend

PostgreSQL	reliable relational database
Drizzle ORM	type-safe ORM with excellent TypeScript support
Postgres.js	fast PostgreSQL client
Next.js API Routes	server logic and endpoints
Server Actions	server functions for form handling

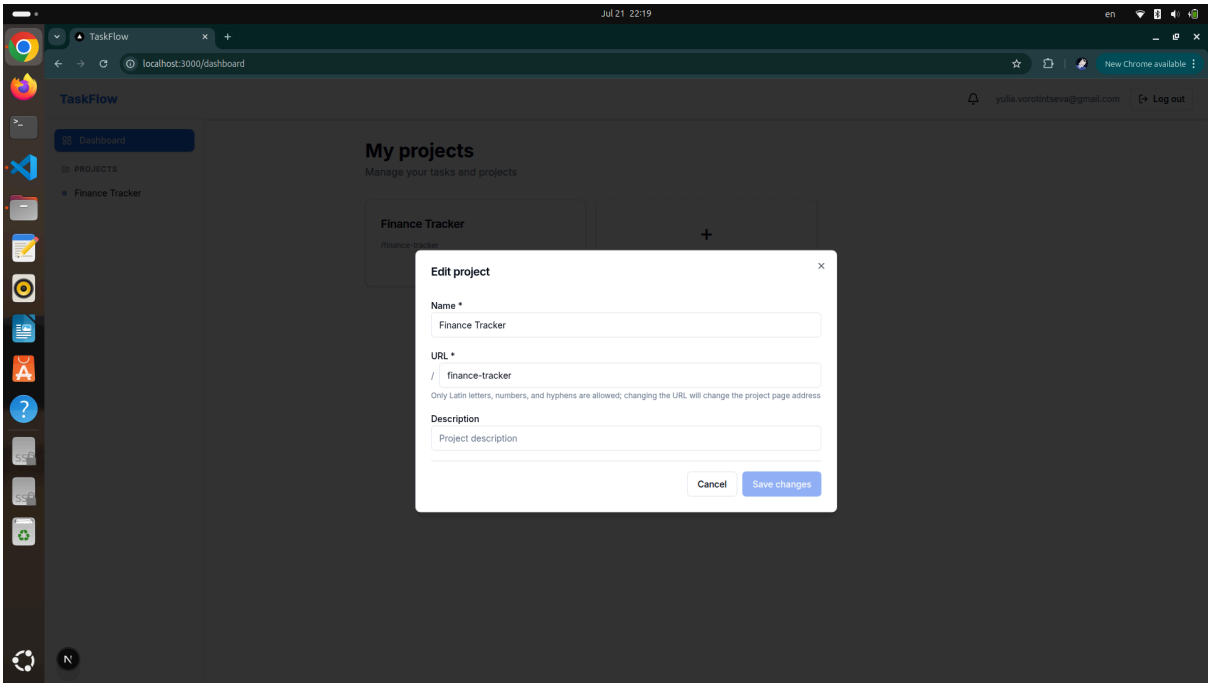

Development Tools

pnpm	efficient package manager
ESLint + Prettier	code linting and formatting
Turbopack	fast module bundler
Drizzle Kit	database migration management

Finance Tracker - Application for thorough financial accounting

March - May 2026

1. Elevator Pitch

Finance Tracker is a modern, high-performance web application for personal finance management, built using a monorepo architecture. It seamlessly combines manual data entry and smart bank statement (CSV) import. The project is built with a strong focus on End-to-End Type Safety, bank-level security (token encryption), and automated testing (>87% coverage).

2. Key Features (Business Value)

Transaction Management

- Manual Input: Fast addition of income and expenses with real-time validation (React Hook Form + Zod).
- Smart CSV Import: A universal parser with auto-detection of delimiters, encodings, and column mapping. Includes built-in presets for popular Russian banks (Sberbank, Tinkoff, Alfa-Bank, VTB).
- Duplicate Protection: Automatic checks based on date, amount, and description during import to prevent duplicate entries.

Automation and Analytics

- Rule Engine: Customizable rules for automatic transaction categorization (e.g., "If a merchant contains 'Pyaterochka', assign 'Groceries' category"). Supports AND/OR logic.
- Dashboard: Real-time aggregated analytics (income, expenses, balance) with visualizations broken down by categories and months.
- Pagination and Filtering: Efficient loading of large transaction lists via cursor-based pagination.

Security and Authentication

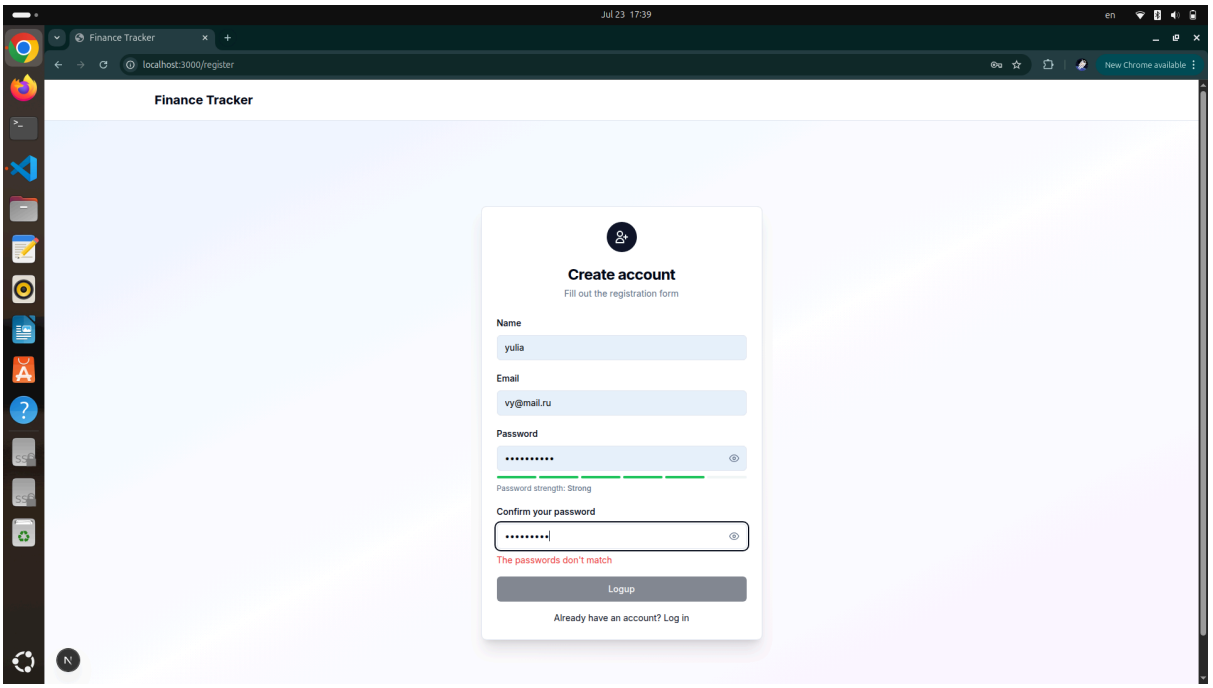

- Multi-provider Login: Support for OAuth 2.0 (GitHub, Google) and classic Email/Password authentication (NextAuth v5).
- Data Encryption: Bank access tokens are encrypted using the AES-256-GCM algorithm before being saved to the database. Encryption keys are stored exclusively in environment variables.
- Attack Protection: Rate Limiting (Upstash), strict Security Headers (CSP, HSTS), and user input sanitization to protect against XSS and SQL injection.

3. Technology Stack

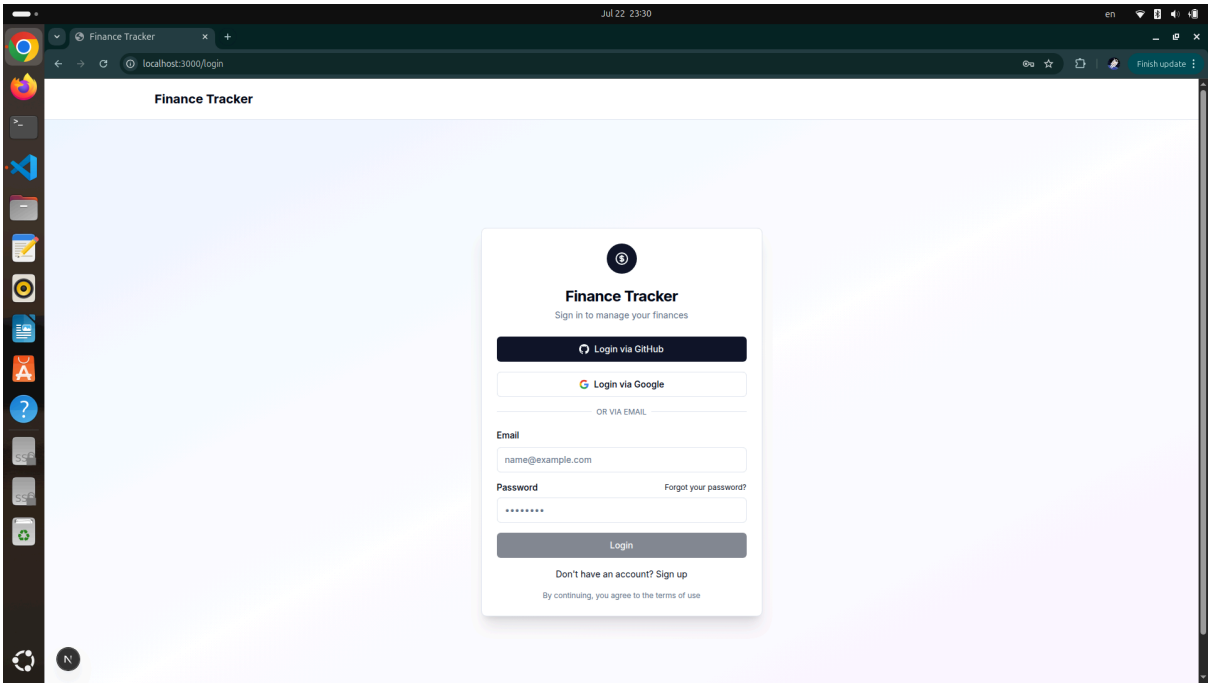

The project utilizes modern, production-ready technologies:

Layer	Technologies
Momorepo	Turborepo, pnpm (Workspace)
Frontend	Next.js 15 (App Router, RSC), React 19, Tailwind CSS
API & Typing	tRPC, Zod, SuperJSON
State Management	React Query (TanStack Query)
Backend (Worker)	NestJS 10, BullMQ (task queues)
Database	PostgreSQL 16, Drizzle ORM
Cache & Queues	Redis (Upstash / local Docker)
Testing	Vitest (Unit, 87%+ coverage), Playwright (E2E)
DevOps & CI/CD	Docker, Docker Compose, GitHub Actions

TravelTracker - Collaborative trip planner

January - March 2026

1. Elevator Pitch

TravelTracker is a cross-platform mobile application for collaborative trip planning, featuring real-time data synchronization. Built on React Native (Expo SDK 54) with strict type safety, network resilience, granular security (RLS), and optimized performance.

2. Key Features

Route Builder

- *Drag-and-Drop*: Smooth reordering of activities with instant index recalculation.
- *Geocoding*: Automatic address resolution via Expo Location.
- *Visualization*: Interactive route map supporting both light and dark modes.

Real-Time Collaboration

- *Live Updates*: Instant reflection of comments, role changes, and member updates across all connected devices.
- *Debounced Invalidation*: Prevents query spam during rapid UI interactions (like drag-and-drop).

Security & Deep Linking

- *Invite Links*: Secure joining via traveltracker://invite?trip_id=...&code=....
- *Auto-Roles*: Joining via link automatically assigns the viewer role.
- *RLS Policies*: Strict access control on all tables (activities, expenses, trip_members, comments) tied to auth.uid() and trip_id.

Adaptive UX

- *System Theme Sync*: Adapts to OS preferences (light | dark | system) with persistent user overrides.
- *Optimized Lists*: FlashList with estimatedItemSize for high-performance scrolling of large datasets.
- *Native Feel*: Animated network indicators, adaptive modals, and smooth transitions.

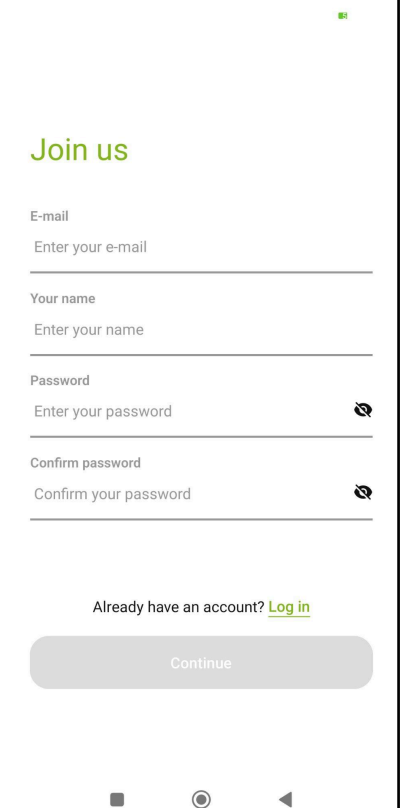

3. Technology Stack

The project utilizes modern, production-ready technologies:

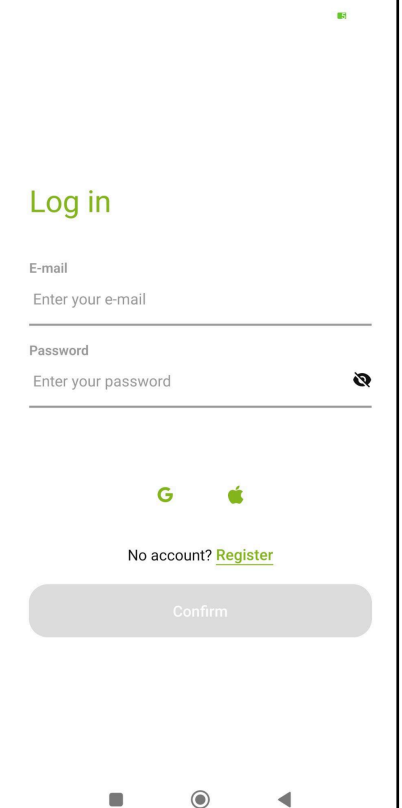

Layer	Technologies	Role
Frontend	React Native, Expo SDK 54, TypeScript, Expo Router	Cross-platform UI, navigation, native module bridging
State and Data	@tanstack/query-async-storage-persister	Query caching, offline persistence, local state management

Backend	Supabase (PostgreSQL, Auth, Realtime, Edge Functions, RLS)	Database, authentication, WebSocket channels, access policies
Native APIs	NetInfo, Expo Location, Deep Linking, Clipboard, System UI	Network status, geolocation, deep links, clipboard access, status bar control
Tooling	ESLint, Prettier, Supabase CLI, EAS Build	Linting, formatting, schema migrations, CI/CD pipeline

Ready for the next step

Thank you for taking the time to review my portfolio. I'm open to discussions about React Native and Frontend developer positions. My focus is type safety, performance, and clean architecture, which directly impact the user experience.

I'm available for remote work or relocation. I'd be happy to discuss how my experience could benefit your team.
